

Let's reinforce CAP!

When? Thursday 20th of April, 2017 12:00 –14:00 (CET)

RECAP will e-meet at a unique webinar to discuss about an improved monitoring of the CAP obligations through remote sensing and modern ICT.

Satellite technology moves fast and images are getting more and more highly resolute. The Sentinel satellites have given rise to new practical solutions since continuous monitoring of land and download functionality are unprecedented.

The RECAP project aims to develop an improved monitoring of the CAP obligations and make cross-compliance more efficient.

The idea of RECAP is to combine state-of-the-art remote sensing with modern ICT and get a service tool for all stakeholders involved in cross-compliance implementation and monitoring (farmers, agricultural consultants, Paying Agencies).

RECAP aspires to offer farmers the ability to comply with regulations, enable agricultural consultants to develop their own services within the platform and reduce the administrative burdens for the Paying Agencies.

Who can join the webinar?

... **Subscribe**

We welcome EU and National Authorities, Paying Agencies, farmers and their organizations, agricultural advisory services and consultants, agronomists, academics and researchers in agriculture, ICT and remote sensing, environmental organizations, ICT companies, remote sensing downstream companies...

12:00- 14:00 What will you learn if you join the webinar

Welcome / introduction

Machi Simeonidou: Project Coordinator, RECAP Project

RECAP platform presentation(farmer interface)

Ifigeneia Tsioutsia: Project Manager, RECAP Project

The satellites behind the platform

Ioannis Papoutsis: Research Partner, RECAP Project

The view of a Paying Agency

Liutauras Šimkus: Paying Agency Partner, RECAP Project

Have your say... your time to speak
